BOOK REVIEW

The Furtherance of Medical Research.

This material was prepared for a series of lectures delivered at Yale University under the Terry Foundation to encourage "Lectures on Religion in the Light of Science and Philosophy." The author has had wide experience with the direction and support of Medical Research and is well recognized for his sympathetic and farseeing attitude toward the medical research worker as well as toward the many sources of financial support for universities and laboratories. For all those who seek financial aid for research as well as for those who contemplate offering such aid, in whatever guise, this little book is packed with valuable suggestions and advice.

The chapter heads read: I. Medical Research Described. II. Universities and Foundations. III. The Medical Research Worker.

Two appendices offer an outline of a properly prepared request for research grants and another for presenting a Proposal for a Capital Grant for Building a Research Institute.

The author specifies the gifts of the good investigator in the following order: 1. Observation; accompanied by record making which is a stimulus to accuracy, validity and usefulness of observation. 2. Study; 3. Comparison; 4. Analysis; 5. Classification, and 6. Inductive Reasoning and formulation of Conclusions. He says, "Experiment is first to test a theory—only later to prove it."

He suggests that Specialists' Societies should nominate Research Councils to be intrusted with the expenditure of funds collected by public subscription (a plan already in operation in the Academy of Pediatrics). In this connection, he makes a suggestion worth much consideration by anesthetists—the collection of an extra 5 per cent with private fees, this amount to be set aside as a research fund by the physician, or by the department in which he works. It occurs to the reviewer that this 5 per cent, donated by the patient might, with good effect, be matched with a similar amount of each fee, donated by the physician.

In order to secure financial support for research, it is necessary to convince the layman of the value of such undertakings. The author emphasizes the order of interest of the layman in a research project; namely, 1. Its meaning to me; 2. Conclusions; 3. A good summary of the work; 4. Findings in detail; 5. What methods were used; 6. What selection of phenomena was subjected to study. Thus, by presenting a project to laymen in what would be a logical order to the research worker himself (the reverse of that listed above), he might fail completely in enlisting interest because of his method of approach.

The sympathetic understanding of the viewpoint of the philanthropist, the Foundation, and the individual research worker shown throughout the book is most gratifying. While driving past a beautiful new Masonic Temple in the company with one of the prominent officials of the local Masonic Order, your reviewer chanced to re-
Book Review

mark upon the satisfaction in accomplishment which his companion must feel in the completion of this magnificent edifice. His reply was, "When any organization reaches the point where it can erect a monument to itself, it has been my experience that it has passed its period of usefulness." In similar vein, the author quotes Thorvald Madsen's conundrum, "What is the title of the last publication of every great scientist—in any country, in any language?" and the answer, "A Description of My New Laboratory."

Whether the interest of the anesthetist is only in the products of research or in the work itself, he will find this book of Alan Gregg's both stimulating and informative.

RALPH M. WATERS, M.D.

Bindings for Volumes 1 and 2 of Anesthesiology are available in green cloth with gold lettering (price, $2.00 per volume; 15 cents extra for name), or in yellow cloth with black lettering (price, $1.50 per volume). Journals to be bound should be sent, together with the index, to the office of the Business Editor, Paul M. Wood, M.D., 745 Fifth Avenue, New York City.

MEDICAL LITERATURE COPYING SERVICE

Under the authority of the Surgeon General of the Army, a microfilm copying service has been established through the efforts of the "Friends of the Army Medical Library." The object of this service is to render the collection of extensive medical literature in this library available to research workers. A "Current List of Medical Literature" is published each week which contains the tables of contents of the periodicals received by the library. Those interested in medical subjects are thus able to learn promptly the titles of papers of interest to them as they appear. They may then secure photographic copies of articles which may not otherwise be available to them. The subscription price for both the weekly "Current List of Medical Literature" and lists of "Recent Book Acquisitions," which are issued several times per year as supplements, is $5.00 per year in the United States and $5.50 per year in other countries. Microfilm copies of articles may be obtained at 25 cents for each complete article not exceeding 25 pages in length and 10 cents for each additional 10 pages or fraction thereof. Prepayment is not requested. Remittance may be made with subsequent orders and in such manner as found most convenient. Address: Medicofilm Service, Army Medical Library, Washington, D. C.
